SUMMARY

At Intercom, a \$350M+ ARR company, I build conversational AI experiences for chat, email, and voice—enabling businesses to deploy autonomous AI agents that deliver human-like, context-aware support at scale. Previously, at Respond.io, a \$20M+ ARR company, I led the development of AI agent infrastructure powering multi-channel conversational support, processing over 13 million daily messages across global businesses. Experienced in micro-services, AWS, and high-performance backend architectures, I'm passionate about creating intelligent, user-centric digital products that redefine how people interact with technology.

WORK EXPERIENCE

Product Engineer 3 - Intercom - London, UK

June 2025 - Present

As part of Intercom's AI Agent Team, I build large-scale conversational AI infrastructure for chat, email, and voice automation—powering over 30,000 businesses worldwide. Our goal is to enable autonomous, context-aware agents that combine advanced LLMs with robust backend architecture to deliver reliable, human-like interactions, while contributing to team growth through interviewing, mentoring, and management of projects.

- **Led end-to-end delivery of Fin Attributes**, a real-time, AI-driven conversation categorisation product that enriches live conversations with structured attributes (intent, topic, metadata) using LLMs, processing 500k+ conversations per day to power automation, routing, analytics, and reporting.
- **Owned Fin Observability end to end**, designing and implementing real-time telemetry across chat, email, and voice to measure latency, availability, and resolution rates, with per-channel SLOs, alerting, and production dashboards for monitoring Fin's health and performance.
- Built **AI-driven auto-investigation workflows** that trigger on SLO degradations, correlate telemetry signals, and surface likely root causes, significantly improving incident response and on-call effectiveness.
- Partnered closely with product, design, ML, and infrastructure teams to define feature scope, UX flows, rollout strategies, and success metrics for AI-driven capabilities.

Tech Used: Ruby on Rails, Golang, TypeScript, Ember, React, PlanetScale, AWS (Lambda, EC2, SQS, DynamoDB, ElasticSearch), Redis, Terraform, Datadog, Honeycomb, Sentry, Buildkite, Anthropic Claude, Cursor, Figma, RAG frameworks.

Senior AI Engineer - Respond.io - Malaysia

Nov 2023 - May 2025

Led the development of AI agent messaging infrastructure supporting 13 million daily conversations across multiple communication channels. Focused on delivering low-latency, reliable, and scalable backend systems for enterprise level customer support AI agents.

- Solved complex backend challenges and built distributed infrastructure enabling AI agents to handle 13M+ daily messages with high availability.
- Optimized conversation workflows by refactoring core modules and improving server configurations, reducing response time from 700 ms to 100 ms and boosting user satisfaction by 30%.
- Enhanced push notification systems through batching and delivery optimization, cutting average delivery time from 10 s to 2 s for faster user engagement.
- Collaborated with a cross-functional team of 15 engineers, ensuring smooth product delivery, scalability, and performance across global deployments.

Tech Used: Node.js, Golang, Typescript, RDS, DynamoDB, Redis, SQS, Lambdas, CloudFormation, CloudWatch, Docker, Buildkite

Senior Software Engineer - Nimblebot - USA Remote

Jul 2022 - Nov 2023

- Worked at Nimblebot, a premier provider of design and development services for industry leaders and government organizations (e.g., PayPal, Coursera, MIT, GitHub, HBO, Saudi Tourism Authority, Al Futtaim).
- Led the tech team of 6 engineers as a product engineer.
- Ensured products met user needs through a customer-focused approach.
- Crafted scalable architectures and built robust systems for web and mobile applications.
- Spearheaded the development of the Hyyp mobile application, a social impact network for web 3.0 users.

Tech Used: Node.js, Golang, Vue.js, Solidity, Typescript, RDS, DynamoDB, Redis, SQS, Lambdas, CloudFormation, CloudWatch, Docker, Buildkite

Software Engineer - Southville Soutions - USA Remote

Feb 2019 - Jun 2022

- Engineered a robust biotech research SaaS platform that streamlined data analysis processes, reducing project turnaround times by 40% and enabling researchers to manage 250+ active projects concurrently with improved accuracy.
- Added new modules and features, and wrote unit tests for the existing codebase.
- Collaborated with a large team in an agile setup.
- Developed a SaaS security platform with integration support for HR data export.
- Created a healthcare portal for families to track vitals, doctor appointments, prescriptions, etc. This portal is being used by millions of families in Canada.
- Built a drag-and-drop form builder for doctors to create patient forms in hospitals for a tool used daily by millions of doctors in Canada.

Tech Used: Vue.js, Angular, Typescript, Jest, Jasmine, Node.js, PHP, Odata, Breeze, Azure Pipelines

Software Engineer - Smart Coders - Pakistan

Sep 2016 - Feb 2019

Developed and maintained scalable web applications using Node.js, Golang, and PHP. Built and optimized RESTful APIs, integrated Vue.js and Angular for the front end, and managed MySQL, PostgreSQL, and MongoDB databases. Deployed applications on AWS (EC2, S3, RDS, Lambda, CloudFront, DynamoDB) and implemented CI/CD pipelines with Jenkins and GitHub Actions. Ensured security best practices with OAuth 2.0, JWT, and RBAC while optimizing system performance. Followed Agile methodologies, conducted code reviews, documented requirements, planning, and infrastructure.

Tech Used: Node.js, Golang, PHP, Angular, Vue.js, MySQL, EC2, S3, RDS, Lambda, MongoDB

EDUCATION

Bachelor of Science in Software Engineering

2012 - 2016

COMSATS Institute of Information Technology, Islamabad, Pakistan

ADDITIONAL INFORMATION

- **Technical Skills:** Microservices, DevOps, Amazon Web Services, GraphQL, Git, Agile Methodologies, Software Patterns
- **Soft Skills:** Good Communication, Problem-solving, Software Project Management, Scrum, Product planning, Customer first planning
- **Management Tools:** Clickup, Jira, Trello, Azure, Notion
- **Languages:** English, Urdu
- **Certifications:** Web Components and Modularization: Practical Approaches, Scrum: Advanced
- **Awards/Activities:** Guinness World Records Holder for "World's Largest Hackathon" for attending **Hajj Hackathon** in the Kingdom of Saudi Arabia organized by the government.
